OUR STORY

ABOUT US

For over 30 years, we have dedicated ourselves to the development and production of the best layout and measuring tools in the market. Our spirit levels, laser levels and layout and marking tools are produced with the customer in mind and are manufactured to the highest possible quality and standards.

Through our state-of-the-art facilities in Israel, China and the United States, we have built a global network of partners that cater to the needs of professionals around the world.

INNOVATION & DESIGN

Kapro's R&D team has revolutionized the layout & measuring tool design, introducing a variety of ground-breaking inventions to the market:

The Plumb Site® Dual-view™ - the only level feature in the market providing a frontal view of the plumb vial, eliminating parallax error as well as neck and back strain due to vertical plumb jobs.

The OPTIVISION® Red Vial - a new standard in vial visibility, achieved by creating a clear color outline around the spirit level's bubble. The clearest, most visible vial on the market today.

Laser positioning legs – with anti-slip grips and multiple angle options, our patented strong folding legs simplify angle mounting and height adjustment of lasers.

Prolaser® levels – offer a complete line of powerful lasers, that when combined with variable combination sets, offer the customer a staggering array of choices.

Specialty levels – unique levels that cater the specific needs of professionals in various trades such as drywall installation, plumbing and electrical work.

OPTIVISION® VIAL

SEE THE DIFFERENCE

The Optivision® vial technology was designed to enhance measuring accuracy with unparalleled visibility. These vials feature highly visible red bubble edges, allowing for precise placement between the reading lines and ensuring optimal vision even in bright or low light conditions. But it doesn't stop at the color alone. The tilted angle of the vial provides a direct line of sight to the bubble, eliminating distortions and guaranteeing accurate readings. The high contrast ratio between the bubble and vial liquid further contributes to faster measurements and superior precision.
